

Interactive Diagram Demo: Bubble Sort

Published: March 10, 2026

What to try

Bubble sort — first pass

Compare neighboring values and swap them when the left value is larger.

Start with the unsorted array

The first comparison will be 5 and 2.

Figure 1: Start with the unsorted array

Swap 5 and 2

Because 5 is greater than 2, the pair changes places.

Figure 2: Swap 5 and 2

Swap 5 and 4

Five moves right again after the next comparison.

Figure 3: Swap 5 and 4

Swap 5 and 1

The largest value has reached the end of the array after one pass.

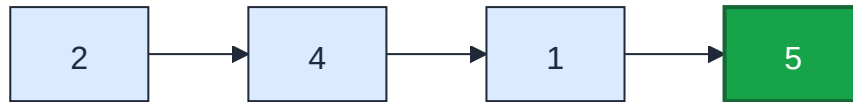

Figure 4: Swap 5 and 1

Use **Previous** and **Next** to inspect each comparison, then select **Play** to run the pass automatically.

The submission buttons above are placeholders. They open `example.com` and do not submit data.
